Call us today!

That Occupational Health and Safety (OH&S) Acts throughout Australia call for all portable equipment, appliances, electric tools, extension leads, power boards and portable residual devices in commercial and industrial areas be tested for safety on a regular basis. Under the Victorian Occupational Health and Safety Act (2004), the employer has a legal obligation to ensure that the workplace and equipment are safe, without risks to health.

This means identifying whether there are any hazards associated with electrical equipment, assessing those risks and taking measures to eliminate or control them.

What is test and tag?

Testing and tagging involves both a visual inspection and the electrical testing of in-service equipment for personal safety (including all portable appliances and some relocatable or fixed equipment, depending on its method of connection to the electrical source).

Why should I test and tag my electrical equipment?

A well planned program of preventive maintenance, with regular electrical safety checks, is the ideal way to avoid unnecessary and unfortunate accidents, as well as the legal ramifications that follow.

What needs to be tested?

Almost every item that plugs into a power point in the workplace should be included in a regular inspection program. These include but are not limited to:

- ⚡ Computers and office equipment
- ⚡ Portable, hand-held and stationary appliances
- ⚡ Power tools
- ⚡ Welders
- ⚡ Flexible cords connected to fixed equipment
- ⚡ Cord extension sets and power boards
- ⚡ Residual Current Devices

Testing and Tagging can only be carried out by suitably qualified and licenced technicians.

Our Services:

- ✓ Testing to Australian Standards AS/NZS 3760-2010
- ✓ Worksafe Compliance
- ✓ Single and 3 Phase Testing
- ✓ RCD/Safety Switch Testing
- ✓ Total Asset Management & Maintenance
- ✓ Microwave Radiation Testing
- ✓ Exit Light Testing & Maintenance
- ✓ Smoke Detector Maintenance
- ✓ Out of Hours Service
- ✓ Minor Repairs and Replacements
